Aggregates: sand, gravel and crushed rock aggregates for construction purposes

Edited by M R Smith (University of London, Imperial College, UK) and L Collis (Sandberg, UK)

In 1985 the Geological Society published Aggregates as the first volume in its Engineering Geology Special Publication series. It met with immediate acclaim, being awarded the Brewis Trophy by SAGA in 1986 and drawing the following review from the Canadian Geotechnical Journal in 1988:

*This book is in general a well-researched, informative and useful guide to the location, sampling and testing of aggregates. If your work involves the use of aggregates, buy this book and read no further; this volume will be an essential and valuable reference that you will use for many years.*

In 1989 the Engineering Group of the Society reconvened the working party whose work had resulted in the publication of Aggregates, to revise, update and extend their report. To ensure accuracy, each chapter was reviewed by independent referees.

This revised report represents the distillation of a vast body of knowledge and experience held not only by the members of the working party but also by many international experts, scientists and engineers who contributed as reviewers, referees and corresponding authors.

**Working Party Members**

- Mr L Collis (Sandberg)
- Prof P G Fookes (Chairman; consulting engineering geologist)
- Mr R Fox (Ready Mixed Concrete (UK) Ltd)
- Mr G P Hammersley (Technical Services, Laing Technology Group)
- Mr P M Harris (Principal Scientific Officer, BGS)
- Dr I E Higginbotom (consultant to Wimpey Environmental Ltd)
- Dr G Lees (formerly University of Birmingham)
- D I Roberts (Land and Mineral Resource consultant)
- A R Roeder (Principal Concrete Technologist, British Cement Association)
- Dr I Sims (Sandberg)
- Dr R G Thurrel (formerly Regional Geologist with BGS)
- Dr G West (Head of Aggregates Section, BGS)

**Outline of contents**

- Introduction
- Occurrences
- Field investigations
- Extraction
- Processing
- Classification
- Testing
- Aggregates for concrete
- Aggregates for mortar
- Unbound aggregates
- Bituminous bound aggregates
- Rail ballast
- Filter media
- Appendix: Engineering properties of rock

**Geological Society Engineering Geology Special Publication No 9**

- 360 pages, 167 illustrations, hardback, August 1993
- List price £39/US$65
- Members price £19.50/US$32.50
