Editor's Note: Correction to ‘Chalk fracture system characteristics: implications for flow and solute transport’ by P. L. Younger & T. Elliot (Quarterly Journal of Engineering Geology, Vol. 28, Supplement 1, S39–S50)

In the above paper an error appeared in equation (11) on page S44, namely that estimates of hydraulic conductivity (K) are in metres/second and not metres/day as stated.

We are grateful to Mr M. Price for bringing this error to our attention. A full discussion of the implications of the error will appear in Volume 28, part 4 of the Quarterly Journal of Engineering Geology. Volume 28, part 3 will be a thematic issue including the findings of the Engineering Group Working Party on the Description and Classification of Weathered Rocks for Engineering Purposes.

J. C. Cripps
