CONTENTS - Volume 41, Part 2, May 2008

Lötchberg tunnel disaster, 100 years ago
T. Waltham 131

Two hundred years of engineering geology
M. G. Culshaw, H. J. Reeves & M. S. Rosenbaum 137

The historical record as a basis for assessing interactions between geology and civil engineering
A. K. Turner 143

William Smith and the development of engineering geology in England
A. Forster & H. J. Reeves 165

Fred Shotton: a ‘hero’ of military applications of geology during World War II
E. P. F. Rose & J. C. Clatworthy 171

Rudolph Glossop and the development of ‘Geotechnology’
R. Williams & D. Norbury 189

Peter George Fookes – father of modern British engineering geology?
J. Charman 201

William Robert Dearman: Britain’s first Professor of engineering geology
G. M. Reeves 217

Engineering geology at Imperial College London; 1907–2007
M. H. de Freitas & M. S. Rosenbaum 223

Engineering geology and geotechnics: the role of higher education with particular reference to the undergraduate programmes at Portsmouth
N. Duncan, A. J. Poulson & G. R. J. Browning 229

Terrain evaluation for Allied military operations in Europe and the Far East during World War II: ‘secret’ British reports and specialist maps generated by the Geological Section, Inter-Service Topographical Department
E. P. F. Rose & J. C. Clatworthy 237

Subscription rates 2008 (volume 41, 4 parts). All correspondence relating to trade subscriptions should be addressed to the Journal Subscriptions Department, Geological Society Publishing House, Unit 7, Brassmill Enterprise Centre, Brassmill Lane, Bath, UK, BA1 3JN (tel 01225 445046; fax 01225 442836; e-mail: sales@geolsoc.org.uk). The subscription prices for 2008 to institutions and non-Fellows is: QJEGH Current £324 (UK), £369/$738 (overseas), QJEGH Plus £374 (UK), £419/$838 (overseas). Single issue price is £113 (UK) and £129/$258 (overseas). More information about subscription options can be found at http://www.geolsoc.org.uk/LyellCollection.

Outside Europe, the Journal is dispatched by various forms of airspeeded delivery; Periodicals Postage paid at Rahway, NJ. POSTMASTER: send address corrections to the Quarterly Journal of Engineering Geology and Hydrogeology, c/o Mercury International, 365 Blair Road, Avenel, NJ 07001. Back numbers are normally dispatched by surface mail.

Cover Photograph. Damage to the track formation on the Severn Valley Railway near Highley, Shropshire, UK at national grid reference SO 753 820. The landslip was caused by heavy rain and flooding near the River Severn during June 2007. The focus of collapse occurred at the contact between geotechnically contrasting materials. In this case at the base of the embankment (pink-red) fill of the bulk of the embankment, which comprises materials of the Carboniferous Alveley Member (Salop Formation), while the bedrock (also Alveley Member, but here obscured by the washout) remained in situ, undisturbed. Overlying made ground for ballast compensation (black ash materials to right of photograph) were washed away by flood water. The Severn Valley Railway runs for 26 km between Kidderminster (Worcestershire) and Bridgnorth (Shropshire). Donations to help repair the railway line after the flood can be given at http://www.svr.co.uk/appeal.php. Photograph reproduced courtesy of the Severn Valley Railway and David Symonds Associates.
