 Quarterly Journal of Engineering Geology and Hydrogeology

2012 Volume 45 ISSN: 1470-9236

Scientific Editor: M. G. Winter, Transport Research Laboratory (TRL), UK

Editorial Board: J.P. Bloomfield, British Geological Survey, UK; E. Bromhead, Kingston University, UK; S. Buss, ESI LTD, UK; A. Butler, Imperial College of Science Technology & Medicine, UK; A. N. Charalambous, Hydrolaw Limited, UK; L. J. Donnelly, Wardell Armstrong International, UK; D. Entwistle, British Geological Survey, UK; J. S. Griffiths, University of Plymouth, UK; I. Holman, Cranfield University, UK; N. Howden, Cranfield University, UK; I. Jefferson, University of Birmingham; N. Koor, University of Portsmouth, UK; B. Marker, Independent Consultant, UK; S. Mathias, Durham University, UK; R. Moore, Halcrow Group Limited, UK; T. Muten, Tapajos Limited, UK; D. Norbury, David Norbury Limited, UK; M. O. Rivett, University of Birmingham; J. W. N. Smith, Shell Global Solutions, UK; D. Toll, Durham University; G. Tuckwell, RSK, UK; N. Walton, University of Portsmouth, UK; R. Ward, Environment Agency, UK

Associate Editors: R. Ahmad, University of the West Indies, Jamaica; J. Buma, Deltares, The Netherlands; J. Cassar, University of Malta, Malta; D. F. Fenster, Bechtel Power Corporation, USA; P. Flentje, University of Wollongong, Australia; R. Guthrie, Hemmera, Canada; A. Ireson, University of Saskatchewan, Canada; B. Jackson, Victoria University of Wellington, New Zealand; A. Jiménez-Madrid, CRN Consultores, Spain; J. R. Keaton, AMEC Environment & Infrastructure, Inc, USA; S.-G. Lee, The University of Seoul, Korea; M. Long, University College Dublin, Ireland; B. Misstear, Trinity College Dublin, Republic of Ireland; R. Muzikar, Consultant, Czech Republic; K.C. Ng, Geotechnical Engineering Office, Hong Kong; P. Paige-Green, CSIR Built Environment, South Africa; R. Stacey, University of Witwatersrand, South Africa; A. K. Turner, Colorado School of Mines, USA; J. Wasowski, National Research Council, Italy; A. Williams, BECA Infrastructure Ltd, New Zealand.

Contents of Volume 45

Part 1 February 2012

Editorial
M. G. Winter 3

Photographic feature
A field guide to the engineering geology of the French Alps, Grenoble
D. Giles 7

Research Articles

Hydrogeological insights from groundwater level hydrographs in SE Ireland
K. M. Tedd, B. D. R. Misstear, C. Coxon, D. Daly & N. H. Hunter Williams 19

Groundwater resources of aquifers with extensive confined regions illustrated by the Woburn Sands, Bedfordshire, UK
K. R. Ruston & R. C. Carter 31

Geochemical and mineralogical properties of the Lower Callovian (Jurassic) Kellaways Sand, variations in trace element concentrations and implications for hydrogeological risk assessment

Chlorofluorocarbons as tracers of landfill leachate in surface and groundwater
A. E. Foley, T. C. Atkinson & Y. Zhao. 61

Swelling tests on material from the Guabirotuba Formation, Parana, Brazil, with suction control
E. M. Pereira, O. J. Pejon & L. V. Zuquette 71
Assessing the potential for future first-time slope failures to impact the oil and gas pipeline corridor through the Makarov Mountains, Sakhalin Island, Russia
79

Laboratory investigation of wave run-up caused by landslides in dam reservoirs
A. Najafi-Jilani & B. Ataie-Ashtiani
89

Mapping and predicting electrical conductivity variations across southern England using airborne electromagnetic data
D. Beamish & J. C. White
99

Technical Notes

Modelling the decrease of total soluble salts of clayey soils during long-term soaking
S. S. Razouki, D. K. Kuttah & N. W. Jassim
111

Groundwater flood or groundwater-induced flood?
N. S. Robins & J. W. Finch
119

Discussions
Discussion on ‘The application of analytical solutions to the thermal plume from a well doublet ground source heating or cooling scheme’ by D. Banks, Quarterly Journal of Engineering Geology and Hydrogeology, 44, 191–197.
J. Barker
123

S. Hosseyni, N. Torii, E. N. Bromhead, M. E. Barton & P. Garvey
125

Part 2 May 2012

Research Articles
Some observations about man-made features on natural terrain in Hong Kong
K. A. Styles & M. H. Law
131

Comparison of surface wave techniques to estimate shear wave velocity in a sand and gravel sequence: Holme Pierrepont, Nottingham, UK
D. A. Gunn, G. Williams, M. G. Raines, J. P. Busby, J. D. O. Williams & S. G. Pearson
139

Lithostratigraphic controls on recharge to the Chalk aquifer of Southern England
A. J. Gallagher, H. K. Rutter, D. K. Buckley & I. Molyneux
161

A comparison of field methods used to define saline–fresh groundwater interfaces at two sites in North West England
F. C. Brassington & R. Taylor
173

Sand pumping and well design in consolidated and semi-consolidated sandstone aquifers
A. N. Charalambous, M. Packman & B. R. Burnet
183

Earth fissure formation from groundwater pumping and the influence of a stiff upper cemented layer
M. Budhu & I. Adiyaman
197

Correlation between Cα/Cc and index parameters of soils
M. Jesmani, R. Vaezi & M. Kamalzare
207

Field strength development of repaired pavement using the recycling technique
A. Chinkulkijniwat & S. Horpibulsuk
221

Subsidence map of underground mining influence for urban planning: an example from the Czech Republic
M. Marschalcko, I. Yilmaz, M. Bednářík, K. Kubečka, T. Bouchal & J. Závada
231

Technical Notes

The accuracy of sand and gravel reserve estimates
D. R. Wardrop
243
Part 3 August 2012

**Review Article**
The Eleventh Glossop Lecture: Making sense of Chalk: a total-rock approach to its Engineering Geology
R. N. Mortimore

**Research Articles**
Methodology for creating national engineering geological maps of the UK

The US Geological Survey’s Military Geology Unit in World War II: ‘the Army’s pet prophets’
C. M. Nelson & E. P. F. Rose

Pulse transmission techniques for the characterization of serpentinites from Central Greece
K. Diamantis, Th. Karamousalis, E. Gartzos & G. Migiros

A GIS for the planning of electrical earthing

**Discussion**
Discussion on ‘Measurement of total core recovery; dealing with core loss and gain’ by S. Valentine & D. Norbury
Quarterly Journal of Engineering Geology and Hydrogeology, 44, 397–403
K. Nicholls, S. Valentine & D. Norbury

Erratum for Jesmani et al., Quarterly Journal of Engineering Geology and Hydrogeology, 45 (2), 207–220

Part 4 November 2012

**Research Articles**
Human interference on soft cliff retreat: examples from Christchurch Bay, UK
S. Brown, M. E. Barton & R. J. Nicholls

Benefits of a 3D geological model for major tunnelling works: an example from Farringdon, east-central London, UK

Petrophysical and durability tests on sedimentary stones to evaluate their quality as building materials
G. Cultrone, A. Luque & E. Sebastián

The impact of petrographic characteristics on the engineering properties of ultrabasic rocks from northern and central Greece
I. Rigopoulos, B. Tsikouras, P. Pomonis & K. Hatzipanagiotou

Influence of organic content and degree of decomposition on the engineering properties of a peat soil in NE China
L. Nie, Y. Lv & M. Li

The effect of groundwater overexploitation on land subsidence and sinkhole occurrences, western Iran
G. Khanlari, M. Heidari A. A. Momeni, M. Ahmadi & A. T. Beydokhti

Measurements of spontaneous potential in chalk with application to aquifer characterization in the southern UK
M. D. Jackson, A. P. Butler & J. Vinogradov

The hydrochemistry of a Chalk aquifer during recovery from drought
W. G. Darling, D. C. Gooddy, B. L. Morris & D. W. Peach

New understanding of deep unsaturated zone controls on recharge in the Chalk: a case study near Patcham, SE England
H. K. Rutter, J. D. Cooper, D. Pope & M. Smith

Field determination of shallow soil thermal conductivity using a short-duration needle probe test
W. King, D. Banks & J. Findlay

Not Just Software... RockWare.
For Over 29 Years.

RockWorks®
Underground Data Management, Analysis & Visualization
- Powerful borehole-based data manager includes: Geotechnical Data (e.g. compaction), Oriented Fractures, Lithology (wet & dry), Stratigraphy (e.g. weathering horizons), Hydrology, Sed Chemistry, Downhole Geophysics, Core boring logs, cross-sections, fence diagrams and 3D models Contour data in 2D and 3D (isocounts) Advanced material volumetrics AutCAD DWG and ESRI Shape import/export capabilities Includes RockWorks Utilities

LogPlot®
An Indispensable Collection of Modeling, Analyze, and Display Tools
- Point and multivariate mapping tools Contour maps and three dimensional surfaces Section and Leases maps Hand grid data included Google Earth experts Gridding and block modeling tools Volumetrics Pre-visualization Piper and STiff diagrams Rose & Stereonet diagrams Statistical tools including histograms, scatter plots and ternary diagrams

Call for pricing
Free trials for most of our products available at www.rockware.com

RockWare Training and Consulting Workshops, Custom Training and Consulting Services for the Geoscientist
- Workshops held in Lugano, Switzerland or onsite
- Training and consulting services available for RockWare, Logsoft, Surfer, and ArcGIS
- Get individualized attention from a software/industry expert
- Follow a standard course format, or have our design a custom course tailored to your needs
- Services include map creation, volumetric estimation, database completion, and exploration and analysis of drill holes

New 101 P7 Water Level Meter

- New P7 Submersible Probe measures water level and total well depth
- More consistent measurements with sensor located at tip of probe
- New durable PVD/F flat tape is laser marked every mm or 1/100 ft
- Markings are Certified Traceable to National Standards

The NEW Solinst 101 Water Level Meter with P7 Probe features an extremely durable, laser marked PVD/F flat tape, with an enhanced dog bone design that is thicker, reducing adherence to the side of well casing.

The PVD/F flat tape is laser marked each mm or every 1/100 ft, lengths up to 1800 m (6,000 ft). New flat tape has increased tensile strength and electrical efficiency by using 6 strands of copper coated stainless steel and 13 strands of stainless steel in each conductor. P7 Probe is engineered to allow submersion to 300 m (1000 ft). Sensor at the tip of the probe provides consistently accurate measurements in wells, boreholes, and cascading water, with almost zero displacement.

122 Oil/Water Interface Meter

Solinst 122 Interface Meter accurately measures depth and thickness of LNAPL and DNAPL product layers.

- Narrow 16 mm (5/8") dia probe
- Lengths to 300 m (1000 ft)
- Heat embossed markings every mm (1/100 ft)
- Certified intrinsically safe
